Truncated apoproteins consisting of the N-terminal chromophore domain are especially preferred. Recombinant apoproteins assemble spontaneously with the bilin chromophore Claimed compositions comprise a protein, glycoprotein, antibody or nucleic acid to be detected linked to the phytofluor. They are used in assays for detecting the other member of a specific binding pair, e.g. immunoassay of antigens, immuno-histochemical labelling, as nucleic acid probes for Southern blotting, for identification of manufactured products, also to detect protein protein interactions, including studies on intracellular protein localisation and identification of transfected cells. The phytofluors make ideal for the protein contact the protein con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This polypeptide comprises a phytochrome of the green alga Mesotaenium caldariorum. The invention provides a new class of fluorescent protein adducts (phytofluors) that are generally suitable for use as fluorescent markers. They comprise a protein component (an apoprotein) and a bilin chromophore such as phytocerythrobilin. Preferred apoproteins are obtained from plants, e.g. oat (see AAW50144), from green algae, or from cyanobacteria (see algorithms).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         identification of transfected cells. The phytofluors make ideal fluorescent markers because they have a long wavelength absorption maximum and high molar absorption coefficient, and are stable to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC (an apoprotein) and a bilin chromophore such as phycocrythrobilin.

CC Preferred apoproteins are obtained from plants, e.g. oats, from

CC green algae, e.g. Mesotaenium caldariorum (see AAW50145), or from

CC cyanobacteria such as Synechocystis (see AAW50143). Truncated

C apoproteins consisting of the N-terminal chromophore domain are

c especially preferred. Recombinant apoproteins assemble

C comprise a protein, glycoprotein, antibody or nucleic acid to be

C detected linked to the fluorescent adduct. They are used in assays

C comprise a protein glycoprotein, antibody or nucleic acid to be

C detected linked to the fluorescent adduct. They are used in assays

C immunoassay of antigens, immuno-histochemical labelling, as nucleic

C acid probes for Southern blotting, for identification of manufactured

C products, also to detect protein interactions, including

C studies on intracellular protein localisation and identification of

C transfected cells. The phytofluors make ideal fluorescent markers

C because they have a long wavelength absorption maximum and high

C molar absorption coefficient, and are stable to light and pH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention is related to fluorescent apophytochrome-bilin conjugates, known as phytofluors. An apoprottein known as Cph2 from Synechocystis species is used as the apophytochrome and the bilin is preferably phycoerythrobilin. The phytofluors are useful as fluorescent markers for biological research. The phytofluors have a long wavelength absorption maxima, a high molar absorption coefficient and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Fluorescent apophytochrome-bilin conjugates, e.g. Cph2 (derived from Synechocystis species) and phycoerythrobilin conjugate, useful as fluorescent markers for biological research -

PCC6803. Its amino acid sequence was deduced from locus slr0473 genomic DNA. Expression of the 748-residue polypeptide in E. coll and incubation with phycocyanobilin yields an adduct with a red, far-red photoreversible phytochrome signature. The invention provides a new class of fluorescent protein adducts (designated phytofluors) that are generally suitable for use as fluorescent markers. They comprise a protein component (an apoprotein) and a bilin chromophore such as phycocrythrobilin. Pareferred apoproteins are obtained from plants, e.g. oats (see AAW50144), from green algae, e.g. Mesotaenlum caldariorum (see apoproteins consisting of the N-terminal chromophore domain are especially preferred. Recombinant apoproteins assemble spontaneously with the bilin chromophore. Claimed compositions

                                                                                                                                                                                                                                                                                                                                                                                     spontaneously with the bilin chromophore. Claimed compositions comprise a protein, glycoprotein, antibody or nucleic acid to be detected linked to the fluorescent adduct. They are used in assays for detecting the other member of a specific binding pair, e.g. immuno-assay of antigens, immuno-histochemical labeling, as nucleic acid probes for Southern blotting, for identification of manufactured products, also to detect protein-protein interactions, including studies on intracellular protein localisation and identification of transfected cells. The phytofluors make ideal fluorescent markers because they have a long wavelength absorption maximum and high molar absorption coefficient, and are stable to light and pH.

An apoprotein known as Cph2 from Synechocystis species is used as the apophytochrome and the bilin is preferably phycocythrobilin. The phytofluors are useful as fluorescent markers for biological research. The phytofluors have a long wavelength absorption maxima, a high molar absorption cefficient and the recombinant apoproteins can spontaneously assemble with a variety of bilin chromophore precursors. The present sequence is a phytochrome related peptide from Synechocystis sp.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention is related to fluorescent apophytochrome-bilin conjugates, known as phytofluors. An apoprotein known as Cph2 from Synechocystis species is used as the apophytochrome and the bilin is preferably phycocrythrobilin. The phytofluors are useful as fluorescent markers for biological research. The phytofluors have a long wavelength absorption maxima, a high molar absorption coefficient and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Fluorescent apophytochrome-bilin conjugates, e.g. Cph2 (derived from Synechocystis species) and phycoerythrobilin conjugate, useful as fluorescent markers for biological research -
                                                                                                                      28-SEP-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        recombinant apoproteins can spontaneously assemble with a variety of bilin chromophore precursors. The present sequence is a phytochrome related protein from Synechocystis sp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WO200056355-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Synechocystis sp

An apoprotein known as Cph2 from Synechocystis species is used as the apoprotein known as Cph2 from preferably phycoerythrobilin. The phytofluors are useful as fluorescent markers for biological research. The phytofluors have a long wavelength absorption maxima, a high molar absorption coefficient and the recombinant apoproteins can spontaneously assemble with a variety of bilin chromophore precursors. The present sequence is a phytochrome related protein from Synechocystis sp.
                                                                                                                                                                                 Synechocystis sp

Fluorescent apophytochrome-bilin conjugates, e.g. Cph2 (derived Synechocystis species) and phycoerythrobilin conjugate, useful a fluorescent markers for biological research -
                                                                                                                                                                                                                                                                              Synechocystis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention is related to fluorescent apophytochrome-bilin conjugates, known as phytofluors. An apoprottein known as Cph2 from Synechocystis species is used as the apophytochrome and the bilin is preferably phycoerythrobilin. The phytofluors are useful as fluorescent markers for biological research. The phytofluors have a long wavelength absorption maxima, a high molar absorption coefficient and the
                                                                                                                             19-MAR-1999;

An apoprotein known as Cph2 from Synechocystis species is used as the apophytochrome and the bilin is preferably phycoerythrobilin. The phytofluors are useful as fluorescent markers for biological research. The phytofluors have a long wavelength absorption maxima, a high molar absorption coefficient and the

conjugates, known as phytofluors. An apoprotein known as Cph2 from Synechocystis species is used as the apophytochrome and the bilin is preferably phycoerythrobilin. The phytofluors are useful as fluorescent markers for biological research. The phytofluors have a long wavelength absorption maxima, a high molar absorption coefficient and the recombinant apoproteins can spontaneously assemble with a variety of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             recombinant apoproteins can spontaneously assemble bilin chromophore precursors. The present sequence related protein from Synechocystis sp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Synechocystis species is used as the apophytochrome and the bilin is preferably phycoerythrobilin. The phytofluors are useful as fluorescent markers for biological research. The phytofluors have a long wavelength absorption maxima, a high molar absorption coefficient and the
                                                                   The present invention is related to fluorescent apophytochrome-bilin conjugates, known as phytofluors. An apoprotein known as Cph2 from
                                                                                                                                                                                                WPI; 2000-602195/57

                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ωy
                      The present sequence represents a Amycolatopsis mediterranei rifamycin CC synthesis gene cluster ORF A protein from the present invention. The CDNA fragment comprises a DNA region involved directly or indirectly continuously in the gene cluster responsible for rifamycin synthesis, including CC the adjacent DNA regions to the right and left which, by reason of their function in connection with rifamycin biosynthesis, qualify CC as constituents of this rifamycin gene cluster, and functional CC mediterranei rifamycin synthesis gene cluster, and functional CC mediterranei rifamycin synthesis gene cluster DNA fragment can be used CC be used for inactivating or modifying genes involved in ansamycin or CC rifamycin biosynthesis. The DNA can be used for constructing mutant CC constructs strains from which the natural rifamycin or ansamycin CC biosynthesis gene cluster has been partly or completely deleted. The CC DNA fragment can be used for assembling a library of polyketides. CC A hybridisation probe of the invention can be used for identifying DNA CC fragments involved in the biosynthesis of ansamycins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SS
